Dashboard Analytics	Vendor	As a vendor, I want to view booking statistics visually so that I can analyse venue performance.
Dashboard Analytics	Vendor	As a vendor, I want to interact with charts by time or venue so that I can analyse data from different perspectives.

Acceptance Criteria

Given valid signup details are entered, when the signup form is submitted, then the account is saved successfully in the database.

Given valid credentials are entered, when the login form is submitted, then the user is authenticated and redirected to the correct dashboard.

Given incorrect credentials are entered, when the login form is submitted, then an appropriate error message is displayed.

Given the user is logged in, when the logout button is clicked, then the session is cleared and the user is redirected to the landing page.

Given the user is authenticated, when the profile page is opened, then the user information is fetched from the database and displayed.

Given venues exist in the database, when the hirer opens the venue page, then all venue details are displayed

Given search criteria are entered, the matching venues are displayed when the search is performed.

Given valid booking details are entered, when the application is submitted, then the booking request is stored in the database.

Given Booking Applications exist in the database, the hirer can see the status of their application when they open the dashboard.

Given that a valid document is uploaded, when submitted they are stored and linked to their hirer profile.

Given hiring history exists, when a vendor views the hirer profile, then the hiring history and ratings are displayed.

Given the vendor is logged in, when the vendor dashboard is opened, then all booking applications for the vendor's venues are displayed.

Given a pending application exists, when the vendor clicks approve, the application status is updated in the database.

Given a pending application is rejected by the vendor, the application status is updated accordingly in the database.

Given a valid date and time range is selected, when the block action is submitted, then the blocked period is stored in the database.

Given hiring history exists, when the vendor views an application, then the hirer's hiring history and ratings are displayed.

Given uploaded documents exist, when the vendor views an application, then the hirer documents are displayed.

Given a comment is entered, when the comment is submitted, then the comment is saved and displayed with the application.

Given multiple applications exist, when sorting is applied, then applicants are displayed in descending reputation order.

Given valid venue details are entered, when the update is submitted, then the venue information is updated in the database.

Given booking data exists, when the vendor opens the analytics dashboard, then charts and graphs are displayed using database data.

Given that the chart controls are available, when the user changes the filter, the visualisation is updated accordingly.
